Course, Yr. & Sec.: BSIT 3-B

Activity 2: UML Diagram Design Project

System Description

The **Breakup Recovery Companion System** is a digital platform designed to help individuals cope with the emotional impact of a breakup. It provides users with a safe space to express their feelings by allowing them to log their daily moods and write personal journal entries. Through these features, users can reflect on their emotions and better understand their healing process. The system also includes self-love challenges that encourage positive habits and personal growth during difficult times.

In addition, the system tracks user activity to display healing progress, helping individuals visualize their emotional improvement over time. It also offers motivational quotes to inspire and uplift users as they move forward from their past relationships. By combining mood tracking, journaling, and supportive features, the system promotes mental well-being and emotional recovery. Overall, it serves as a helpful digital companion that guides users toward self-love, resilience, and a healthier mindset.

Actors / Users

- **User** – Inputs data (mood, journal), performs actions (complete challenges), and views outputs (progress, history, quotes).
- **System** – Processes user inputs, updates progress, and generates outputs such as challenges and motivational messages.

Main System Functions

1. **Input Mood Data** – User selects and submits daily mood.
2. **Input Journal Entry** – User writes and saves reflections.
3. **Process Data** – System analyzes mood and activity to compute progress.
4. **Display Progress** – Shows updated emotional status through visuals.
5. **Generate Challenges** – Provides daily self-love tasks.
6. **Update Records** – Saves all activities for future access.
7. **Retrieve History** – User views past logs and progress.
8. **Provide Motivation** – System outputs quotes/messages for support.

UML Diagram Description

The Use Case Diagram illustrates the interaction between the **User** and the Breakup Recovery Companion System, showing how the user engages with the system's main features. It includes key functions such as logging daily mood, writing journal entries, viewing healing progress, completing self-love challenges, and accessing journal history. The diagram also uses **<<include>>** relationships to show that some actions, like viewing progress, depend on previously logged mood data, and **<<extend>>** relationships to represent optional features such as receiving motivational quotes. These connections help explain how different system functions work together to support the user's emotional recovery. Overall, the diagram provides a structured and comprehensive visualization of how the system operates and assists users in their healing journey.
